# Ancora spam su Lightning Network

---

Giovedì 23/11/2023

Episodio: 20

- Sempre più arrabbiati gli sviluppatori di wallet, che devono implementare nuovi sistemi per evitare le notifiche dei Satogram e affini
- Ora si sta ribaltando la situazione, se vuoi leggere queste pubblicità devi trovare escamotage per evitare i filtri :-)
- In molti aprono canali con il nodo di Satogram per approfittare delle molte transazioni in uscita
- Piccola guerra tra Zeus e Mutiny sul tema Lightning Address non custodial

# Liquidity Report

Inbound liquidity represents your node's ability to receive or route payments. With depleted or expensive inbound, customers may not be able to pay to your node.

⚡ DailyZap: Blixt Update

We got a new @BlixtWallet update with lots of nice stuff! A few picks:

- \* Support for O-conf channels in Dunder LSP (the LSP integrated in Blixt),
- \* Support for Simple Taproot Channels (for now only for manually opened channels, but coming soon to channels opened with the LSP as well),
- \* And a massive one: with the new Persistent Mode in Android, Blixt can now run in the background, keeping LND in-sync and even listening for incoming payments. It remains to be seen exactly how this impact battery, but that's definitely a very nice thing to have in a mobile wallet, especially combined with "trustless" or "trust-minimized" Lightning Address providers such as Zaplocker (used in Zeus) or Lightning Box (used in Blixt).
